

What Chandrayaan Can Do

With 11 scientific payloads, it is the most instrumented lunar orbiter ever

Rs 386 crore
is the total cost of
Chandrayaan-1

720 days
is the expected life of
the spacecraft

1,380 kg
is its weight
at lift-off

1.5 m
cuboid is the
size of the craft

Key dates with the moon For 26 years, there has been no human landing

Jan 2, 1959
Soviet Union's Luna
1 did the first flyby.
Followed by Luna 2
which impacted

Dec 21, 1968
Apollo 8 crew
members become
the first humans to
orbit the moon

July 20, 1969
Neil Armstrong and
Buzz Aldrin become
the first humans
on the moon

Sept 12, 1970
Soviet's Luna 16
carries out the first
robotic sample
return to the earth

Dec 7, 1972
Apollo 17 crew
become the last
humans to walk on
the moon
