

The Game Changers INSTITUTIONS

MANDAR DEODHAR

SAHYADRI SCHOOL Pune

UNMARKED BY ANXIETY

On Tiwai Hill, students of Sahyadri School are battling to become efficient consumers of power and water. Because of its location, this residential school has to pump several thousand litres of water from the Bhima river flowing below and depend on a vagrant power supply. The students are working on solutions to cut water requirements and localise power consumption. This includes building a generator which will be powered by a bicycle. The energy produced by the cycling will charge the batteries of the generator, which will power the campus. Also, by removing flushes from all toilets, water consumption has been reduced by 20,000 litres a day this year. Founded in 1995 on J. Krishnamurti's philosophy, the school aims to create the right climate so that the child may develop fully as a complete human being. Affiliated to ICSE, it follows its own curriculum till Class VIII and students face an exam for the first time in Class IX. "The school is untouched by the anxiety of marks," says Principal Amresh Kumar.

by Malini Bhupta

Currently, the eco-friendly school has **225** students and 35 teachers.

SAHYADRI SCHOOL FOLLOWS ITS OWN CURRICULUM TILL CLASS VIII

CHENNAI MATHEMATICAL INSTITUTE Chennai

H.K. RAJASHEKHAR

BY THE NUMBERS

Mathematics is as terrifying as it is enigmatic. But the Chennai Mathematical Institute (CMI) gives this intimidating subject rock star status. Founded by the Spic Science Foundation in 1989, CMI was initially involved only in research with the most significant one being in the field of algebraic geometry, in the area of "moduli of bundles". It got UGC certification in 2007 and since then has been awarding B.Sc and M.Sc degrees in mathematics, computer science and physics. Headed by mathematician C.S. Seshadri, CMI also runs an exchange programme with the

THE TUITION FEE AT CMI IS A PALTRY RS 750 PER SEMESTER

École Normale Supérieure (ENS), France, and every year, two top-ranking CMI students spend the summer at the ENS and in exchange, four Ph.D students from the ENS come to Chennai. Unlike other institutions, the research faculty here are involved in teaching because Seshadri believes, "great learning can be had only from great masters. They should disseminate knowledge and inspire young minds".

by Banumathi Krishnaswamy

25 students are selected for B.Sc, six for M.Sc and two for Ph.D courses.

MOBILE LABS

Andhra Pradesh and Karnataka

WHEEL POWER

In 2002, when an unassuming man called Balaram drove a yellow van into Kuppam, a small village on the Andhra Pradesh-Karnataka border, he was mistaken for a missionary. But the man was on a different mission altogether. What he drove down was a mobile lab with 50 science experiments which were shown to children in the village. The initiative

Mobile labs have benefited about **25 lakh** children and one lakh teachers.
