

DESIGN PROGRAMS AT NIA AFTER SCHOOL

**NAMRATA SURI,
FOUNDER DIRECTOR & CHAIRPERSON**

NIA students of Graphic Design have been really appreciated by the industry. In fact theirs are among the highest salaries in recent times. The work of last year's students is on displays at the campus till end June. We are pleasantly surprised with the quality of work showcased and that too when just completing the second year! This is talent to watch out for.

There has been an excellent response to the opening of NIA's new campus at Noida Phase I, which is not all that far really. The institute campus is located a couple of miles beyond the Indian Oil building on a wide road. With the transport facility provided free for all students, institute buses are traversing through most central areas of Delhi connecting the campus which is just a few minutes drive from DND flyway or Nizamuddin Bridge.

Mrs. Lolita Dutta – Head, NIA Design department says – "We have received a tremendous amount of support from people in the advertising and communication business and on behalf of all of us at NIA, I thank them sincerely".

The best of Advertising and Design is within everyone's reach with NIA courses that are priced very low compared to the industry and are quite affordable especially in contemporary times.

In the communication industry designers are called 'graphic designers' as they work on a variety of media and the graphic interpretation of work may vary from a small sticker to larger than life display. The job profile varies from that of a design trainee to Junior Visualizer to Creative Director or sometimes Agency Head. This is a career deeply rooted in Art, Design, Visualizing and manifestation in Print Ads, Ad Films or Feature Films working from Labels, to Product ads, Film sets, Communication of all sorts.

Design is taught at an undergraduate level by various institutions like NID at Ahmedabad and at NIA in north India. Such programs are the best option for the creatively inclined to join the world of advertising or cinema in the creative streams. These are full graduate level programs and result in placement of the student.

We must understand the difference between a graphic designer and a commercial artist. Commercial art is a narrowed down field of Design, where students are trained to apply basic design skills to a given space, ad or medium. It is usually print media based and skill training is given either for hand or computer applications. Most computer design schools or polytechnics provide a decent commercial art training. Graphic Design is a broader and mental as well as skill training. The mind is trained to be a designer at large. Once learnt, Graphic Design can be applied to any industry – in fact it is the basis of all Design.

A creatively inclined mind and good drawing skill form the foundation of this career. Students should train in drawing at school level to get admission to the institute of choice. Though further drawing training is provided during the three year's study.

Through its association with UWE, Bristol, England, NIA offers its students an added opportunity to go abroad and get an internationally accepted degree after completing the three years in India.

ABES PROVIDING WORLD CLASS TECHNICAL EDUCATION

1789 sparked the Industrial Revolution, which paved the way to establish world-class Industries, corporate houses and multinational companies. The developed nations opened their corridors for free trade and established centers edge technologies world over. But in the heart of those innovations and technological developments lies contribution of the invaluable Indians. The great development in the European countries and in the US are undoubtedly due to strong, very effective and need based under graduate engineering and science education in India. Presently the Indian students dominate the Engineering stream in the leading universities of the world.

Academy of Business & Engineering Sciences, Ghaziabad known as ABES, since the millennium year is contributing significantly with well trained budding technocrats & professionals colts to the stream of corporate world; kindled by a constellation of highly qualified, experienced and dedicated faculty drawn from the IITs and reputed institutions of the nations. At ABES we prepare our products through a phase of rigorous academy regime blended with personality development and extra circular activities to face the challenges of the corporate world by inducing Global standard of education.

"We have dedicated ourselves to providing world—class technical education relevant to the needs of the day. Continuous interaction of students with dedicated faculty members has offered an atmosphere conducive to learning and academic success. We have always strived to become an institute par excellence, which cares for its students and the society at large".

**R.G. MENDIRATTA
DIRECTOR ACADEMICS**
