

The power of 'one' cannot be underestimated. But 'we' always overpowers it.

Innovation is seldom the brainchild of a single entity. Instead, it's a critical process that calls for an assimilation of ideas, expertise and different yet focused perspectives. All of which is possible only when institutions with diverse capabilities collaborate. Today this approach is deemed extremely important to achieve competitive advantage.

As one of the pillars of sustainable growth, management institutes are constantly engaged in grooming future managers and therefore their contribution is indispensable in this process of 'collaborative development'.

We share some of the milestones in WeSchool's journey

- The very name 'WeSchool' brings forth the institution's strong belief in the process of collaboration. Here 'We' stands for the coming together of different values and principles. This translates into innovative approaches, which form the very foundation of our curriculum.

Take for instance some of the programs at WeSchool. The strong network with organizations of repute, WeSchool has developed a unique capability to foresee market trends. The outcome has been truly promising. Where market-driven era is finally giving way to the people-centered era. Businesses today are human-centered. Design thinking is becoming integral to the success of an organization in a world based on creative economy.

In pursuit of innovation, we have shaped a new program - the PGDM program in Design Management. It combines resources of a business school with a college of design, and

focuses on training future business leaders with skills to build and sustain innovative organizations.

Programs such as PGDM Retail Management, PGDM E-Business, and specialized program verticals in Commodity Markets, Agri-business Management, Healthcare Management and Banking to name a few also contribute to the vision that we nourish 'to nurture thought leaders and practitioners through inventive education'.

Some of the other manifestations of our journey include:

► **InnoWe:** Mumbai's first innovation and Memetics lab. At InnoWe, students and alumni come together to give shape to their ideas and learn how to manage innovation in the real world. Both intrapreneurial and entrepreneurial abilities are nurtured here.

► **We research:** Joint study research on 'Strategies on Alternate Energy based Business ecosystems in Rural India' with

Stanford Design for Change Centre. With the objective to understand the economic and social needs and technical opportunities in Rural India and generate innovative and integrated strategies for alternate energy based business ecosystems in the villages.

► **We engage,** with learned persons from various walks of life to inspire students, some of the renowned names have been Vijay Govindrajan, Chief Innovation Consultant at GE and Prasad Kaipa, CEO Kaipa Group.

► **We projects:** Students and faculty are regularly working on live projects with industry to and hope to provide solutions that could be seen using a different pair of lens, where the 'we know' and 'we feel' converge.

'We' is the new 'I' and on this journey we invite you to know more about us, and engage with us to be part of 'We Experience'.
