

## Asian Institute of Infertility Management and Dr. Shefali Jain Test Tube Baby Centre **Patients are family for us**

"In AIIM we work on the principle of ONE STOP FERTILITY CENTRE. In a day's time we try to answer all queries concerning fertility and plan a possible strategy. It is possible in AIIM due to full fledged unit organised in one place. Our success rate, based on our dedication and sincerity, is quite high. It is our success rates and faith of people which bring patients at AIIM not only from metros like Delhi and Mumbai but even from gulf countries, US, Canada etc", said Dr. Dinesh Jain.

AIIM has pride of giving first surrogate baby in central india and first twin surrogate babies in India. Surrogacy is a form of modern motherhood where a woman with absent or infertile uterus or damaged endometrial lining or multiple implantation failures with previous IVF attempts or bad obstetric history of suffering from serious medical disorder may also achieve motherhood.

### **Our Lab :**

**The quintessence of our laboratory, which is completely new and hi-tech:**

It has been installed as per international norms with the emphasis being laid on most modern machines and latest techniques. There is a separate andrology section at the centre in order to keep highly sterilized lab isolated from semen samples from different sources. This lab provides facilities for advanced test on sperms & sperm morphology. Functionally, this area is used for routine semen analyses, sperm preparation for IUI & IVF & training programs on IUI.

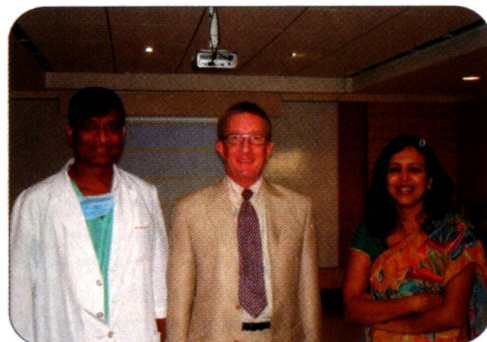

Air contaminates have a major adverse effect on embryo quality & thus pregnancy rates. At most modern air handling unit not only gives positive pressure and continuous air changes but also guarantees further purification of air by filtering bacteria & fungus through hepa filters. High Standards of quality control according to European guidelines with a daily check of co2, pH & temperatures. The techniques followed by us are as per the standards set by our affiliates in Belgium. The use of LASER and IMFI gives an added benefit of success in cases of previous IVF failures.

**The Only Centre in Central India where couples can view the procedures outside OT at 'Sangam' and communicate with the doctor so that the decision for further treatments can be taken.**

**We aim to provide the best available treatment to infertile couples in the most humane manner using most advanced techniques, state of the art equipment and an accomplished team of medical experts.**

**In AIIM we work on the principle of ONE STOP FERTILITY CENTRE. In a day's time we try to answer all queries concerning fertility and plan a possible strategy. 99**

**We can't dream to have such a set up in London. It makes us jealous.  
Dr. Richard J.S. Howell, The Agora Fertility Centre (London)**

**It is one of the best centre I have seen.  
Dr. Lars Johansson, Consulting Embryologist (Denmark)**
