- Pillows, Bolsters & Back Cushions
- Furniture Line, Sheet & Seat Cushions

Fenesta Windows: The hot new idea in home improvement

If you think a window is a window, compare Fenesta with the ones in your home. Made of UPVC, rated the finest window framing material in the World, Fenesta outperforms conventional wood and aluminum windows in a number of significant ways.

For one, Fenesta is multi-chambered, double-sealed and fusion welded and comes with a multiple locking system. Together, these features block noise, dust, pollution, wind and rain. For another, the insulation properties and airtight construction of Fenesta reduce energy and air-conditioning costs.

For a third, Fenesta outlasts buildings. The unique Fenesta UPVC blend, made for harsh Indian conditions, will never fade under the onslaught of extreme ultra violet rays. It requires no maintenance or paint—ever. And termites pose no threat.

The strength of Fenesta leads to the advantage of size. Large windows that rise from the floor to the ceiling and span balconies can add architectural flourishes across your home.

Fenesta is the only UPVC window company in the world with complete control over the entire supply chain of window manufacturing from production of PVC resin to extrusion, fabrication and installation.

Fenesta is part of DCM Shriram Consolidated Ltd. (DSCL), one of north India's largest and most respected business groups. Large investments made by DSCL in infrastructure, service support and trained people have made Fenesta India's first and only experts in window solutions. Make the most of their experience of 400,000 installations and change the way you live.
