

PASSING THE BATON

Congress leader Sushil Kumar Shinde's daughter **Praniti**, 28, who has till now focused on social work, will contest the Maharashtra elections from Solapur City Central. The founder of the NGO Jai Jui took her first political step when she managed her father's campaign in Solapur during the recent Lok Sabha elections.

VS

BJP heavyweight Gopinath Munde's daughter **Pankaja**, 30, on the other hand, will champion dynastic politics in the Parli-Vajnath constituency. A management graduate from Seton Hill University, New Jersey, she has been spending long hours with Daddy at rallies.

Magic Debut

Aladin's genie seems to be working overtime for Jacqueline Fernandez, 24. The debutante, who plays Jasmine in the 3D spectacle, has her dainty arms full with films even before her first one has been released. "I'm just lucky to have had a beginning like this," she says. She recently signed a thriller that not only stars John Abraham but is in fact his home production to be directed by Sabal Shekhawat. Fernandez has even wrapped up shooting for Milap Zaveri's *Jaane Kahan Se Aayi Hai*. Genie can take a break now.

Ramping It Up

A friend suggested modelling and Lisa Haydon, 24, said why not. The Indian-Australian soon became a ramp rage and is now ready to take on films. She's been shooting for her debut, *Aisha*, that has Sonam Kapoor and is an adaptation of Jane Austen's *Emma*. "Sonam is jealous of me in the film because she thinks Abhay Deol's character likes me," says Haydon, who's also Lakme's new face. Showstopper? We think so.

ELITE MODEL MANAGEMENT

MIND OVER MATTER

An Indian-origin scientist, **Venkatraman Ramakrishnan**, has been awarded the Nobel Prize in Chemistry for 2009. The 57-year-old was born in Chidambaram, Tamil Nadu, graduated in physics from Baroda University and did his PhD from Ohio University. Working at the MRC Laboratory of Molecular Biology at Cambridge, he showed what a ribosome looks like and how it functions at the atomic level. The Nobel citation said this will aid in creating new antibiotics.

Light Khao,
Light Raho.
