

## LARSEN & TOUBRO

Established 1938

From the integrated passenger terminals at the Mumbai and Delhi airports to the country's first monorail in Mumbai, the Rs 34,045-crore company has provided steel to India's infrastructural spine

# GOING ALL THE WAY

The next time you hop on to Delhi's metro, cruise down the Panipat Overpass or check-in at the country's world-class airports in Mumbai and Delhi, there's one company that should be thanked—Larsen & Toubro (L&T). This engineering, construction and manufacturing company can be credited for some ground-breaking infrastructure projects in India, which have propelled it into a Rs 34,045-crore company today. L&T that has done India proud, began way back in 1938 by two Danish engineers, Henning Holck-Larsen and Soren Kristian Toubro, who landed on Indian shores to import dairy equipment from Europe. And it's the engineering DNA of the company that has helped it complete some of the most complicated projects while being the only firm in the country to build a nuclear reactor.

Today, L&T is being helmed by the dedicated CEO Anil Manibhai Naik, who rose through the ranks from a junior engineer 45 years ago. As the country has marched to an 8 per cent GDP growth, the company has steamed ahead with a year-on-year growth rate of 35 per cent, bidding for larger, more complex, high-value engineering projects. Naik says the company's

success lies in its mastery of complex start-to-finish turnkey projects where it spearheads everything from the design and construction to execution. The firm along with Malaysian firm Scmi Engineering will construct India's first monorail in Mumbai at a cost of Rs 2,460 crore. L&T bagged Rs

5,500 crore worth of contracts to build integrated airport passenger terminals at Mumbai's Chhatrapati Shivaji International Airport and Delhi's Indira Gandhi International Airport. It will also build one of Asia's longest runways in Delhi at 4.43 km in time for the Commonwealth Games in 2010.
