

EXPANDING HORIZONS OF INDIAN EDUCATION IN GLOBAL ARENA

It's time to open the doors of global education, exchanging ideas, faculty, projects, students and research. Forming altogether a different world where our students are capable of becoming ingenious, no matter what field they chose to enter.

The cut-throat competition everywhere in the world should not hamper the growth of our students. Instead, the education should be such that no obstacle should impede the career path of our future leaders. A professional course should be such that it should give an insight to the students about what is happening in the business markets around the world. Hence, to imbibe the techniques of dealing with the various hindrances, the students need to be equipped with the education and training accepted globally. Joining hand with the institutes abroad, it gives a platform to the Indian students to understand and get a feel of work culture abroad. Similarly, the students from different countries come to India to study, to enhance the learning by leaps and bounds. This exchange gives rise to new ideas and innovation helpful in managing both the Indian and the international markets.

The countries like the UK, UAE, USA and Australia are leaving no stones unturned to tie-up with various Indian institutes and other countries to make the education go global. It is important for the students to learn the aspects of different working cultures in the time of global tie-ups between various countries. To facilitate this, many Indian universities have joined hands with the institutes abroad. The tie-up with universities abroad allows the students to be considered internationally competent. The students get benefit from joint degrees. They are also allowed to go abroad and study at the foreign university's expense. Recently, the Concordia University, Wisconsin, Central Queensland University and University of Western Australia have tied-up with the National Institute of Technology, Warangal, Jawaharlal Nehru Technological University, Hyderabad and University of Hyderabad to start joint courses. This agreement helps students to study the courses designed and taught by the teachers from abroad.

In India, Deakin University has been in the final stage of discussions with the government to establish the Deakin India research institute (DIRI) in Bangalore. The institute, once establishment will enhance research capabilities in critical areas of biotech and nanotech products. Not only this, considering India as a land of opportunities, Australian government plans to develop a 'dedicated Institute' for exploring better ways in the domain of research and innovative areas. It is being done to strengthen the business ties as well as cultural assimilation between India and Australia. A part of the University of Melbourne along with the La Trobe University and University of New South Wales, it surely will add to the economic growth of the country

EDUCATIONAL OASIS IN DUBAI

"You cannot learn to play cricket in a classroom. For that you have to go out in the playing field" says Nitish Jain, President, S P Jain Centre of Management, "similarly students cannot become Global Managers by being taught merely in the confines of classrooms. For this "Transformation" to happen students have to "live" in global cities and experience firsthand the culture and nuances of doing business there."

S P Jain follows what it preaches very seriously!

It has set up campuses in two global cities – Dubai and Singapore, which ensures that the students get an opportunity to spend six months in each city and interact with corporations based there.

"Yes, interaction with local companies does give our students a feel of the local culture and nuances" says Dr Michael Barnes, Dean – Global MBA program, an alumina of the London School of Economics and Stanford Business School "and we reinforce this by inviting faculty and practising managers from across 20 countries".

"In addition, we also have global standard teaching infrastructure like interactive boards in classrooms. All lectures are recorded and students transfer them on their MP3 and during their travel time or free time listen to the lectures as other student's listen to music" says Dr Balkrishna Grandhi, Dean, Executive MBA programme.

Does all this transform the S P Jain students into 'Global Business Leaders'?

"Yes, our tag line sums our final product - "Crafting Global Business Leaders" says Dawn Deckle, ex – McKinsey and now Dean – Center for Leadership, Singapore, "and indeed we do this by imbibing our students with Hard Skills and Soft Skills in equal measure. Result - students make impactful presentations and seamlessly become good Team Players"

Has the S P Jain strategy worked?

A recent study conducted by leading Market Researcher, A C Nelsons, in Dubai, ranked S P Jain as # 1 in a brand perception audit conducted amongst all institutes of higher learning in the UAE.

And has the influence of S P Jain spread to Europe and other destinations?

It would seem so since the Associations of MBAs (AMBA), UK have deemed it fit to extend its accreditation to S P Jain for its GMBA and EMBA programs.

AMBA is the International Gold Standard much coveted by B Schools, since it assures all stakeholders that the B School surpasses the most stringent requirements required to be recognized as a leading Global Business School.

And to further strengthen its position S P Jain has entered into strategic alliances with leading B Schools located in two different continents.

The first strategic alliance is with York University's, Schulich School of Business, Toronto, which is rated as Canada's #1 B School by Forbes, The Wall Street Journal & The Economist.

"Now our students can spend quality time at Toronto, too, arguably the world's most cosmopolitan city" says Barnes proudly.

The second strategic alliance is with the Australian School of Business, University of New South Wales, Sydney, which too is also rated the #1 B School in Australia.

It may seem that for S P Jain and its students the world is their destination.
