

ALL WORK AND NO PLAY

Corporate executives in India do not get enough time for work-outs, a survey by ASSOCHAM reports. While 50 per cent of the 500 respondents don't worry about their future health at all, 48 per cent are "sometimes fearful" about it; 37 per cent are "not at all fearful" and 12 per cent are blissfully unaware. The majority are hardly able to spare time and resources beyond their daily needs. Most companies, however, lack affordable health services for their employees.

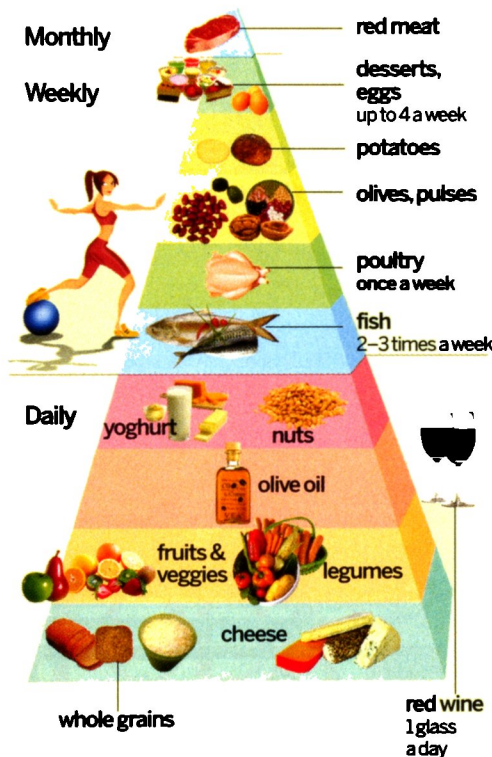

3% of executives worry proactively about the future of their health

THE CLOCK WATCH

Eat at the right time if you want to shed those extra kilos. A study in the journal *Obesity* reports that body's internal clock regulates energy use and that's why the timing of meals becomes crucial to balance calorie intake.

THE BEST DIET OF THEM ALL

How can countries that gave the world finger-licking good food—pizza, lasagna, souvlaki, baklava—teach anything about healthful eating? But that's the latest word from the medical world. According to the *British Medical Journal*, the Mediterranean diet is that "ideal meal plan" that will not just battle your bulges, but will also protect your health—heart attack to cancer, kidney problems to cholesterol, Parkinson's to Alzheimer's. The diet focuses on fruits and vegetables, nuts, grains and olive oil. Eggs, dairy, poultry and fish are consumed regularly—but in measured portions. Meat makes only an occasional appearance. Recently researchers have found a link between this diet and lower risk of diabetes and blood pressure. The Mediterranean diet—with its moderate consumption of red wine, slow cooking and respect for good food as a way of life—wins hands down as a long-term and healthy meal plan.

Good Health on Every Mediterranean Platter

Fish is a rich source of Omega-3 fatty acids. It lowers triglycerides and improves the health of blood vessels.

Olive oil is a healthy mono-unsaturated fatty acid. It helps lower blood pressure, relieves asthma, arthritis, and also prevents diseases like diabetes and cancer.

Sesame seeds contain linoleic acid, Vitamin B3 and E, folic acid and protein.

Aubergine protects the brain from free radical damage, reduces cholesterol and improves heart health.

Nuts contain fatty acid, vitamins, protein and fibre.

Antioxidants in red wine protect the lining of blood vessels in your heart.

Herbs like parsley and mint contain volatile oils, antioxidants and vitamins. They are natural pain relievers and help in digestion.

Chick peas contain tryptophan, copper, fibre, folate, iron, manganese, protein, phosphorous; help lower cholesterol and balance blood sugar.
