

transmission and distribution losses of electricity have also fallen to around 20 per cent. As Chief Minister Sheila Dikshit recalls, "When I became the chief minister, I dreamt of making Delhi a world-class city. Numerous works have been done in that direction and a lot of effort is still going on."

"The Commonwealth Games have given us a timeframe. They have enhanced our speed of work," she adds. Besides the Metro, other initiatives in public transport include the intro-

ON THE CONSUMER FRONT, DELHI IS THE COUNTRY'S LARGEST MARKET

duction of aesthetic, low-floor and semi low-floor buses as part of a proposal to acquire a 3,800-strong fleet before the Games. To reduce the load on the existing Inter-State Bus Terminus (ISBT), two new ISBTs are being developed at Dwarka and Narela. To eliminate the nexus of private bus operators of the infamous Bluelines, the Government has corporatised the private stage carriage system. In an effort to boost public participation in development, schemes like Bhagidari and Suvridha Sangam have also been introduced. As the national capital, with vibrant trade and commerce and employment opportunities, Delhi is attracting people from all over the country. The city is a

HIMACHAL PRADESH IS THE FASTEST MOVER (2003-09) Perhaps the first hill state to realise the importance of infrastructure, Himachal Pradesh is reckoned as the most impressive model of development in India.

MACRO ECONOMY

Sustainable and inclusive progress reflects how the state is managing its finances to achieve inclusiveness and basic prosperity in a

sustainable manner. Per capita GDP of the state is one measure of prosperity, urbanisation another, and percentage of population above the poverty line a third. Investment by the government is aimed at improving access and incomes for all and this is captured by capital expenditure on a per capita basis. At the same time government expenditures should not be at the cost of debt as that works against future progress and therefore the inverse value of per capita state debt is used. The per capita value added from basic utilities, namely, electricity, gas and water supply is another variable included to capture inclusiveness and sustainability.
