Dr. N. P. Gupta

■ GREENLIGHT LASER VAPORIZATION OF PROSTATE, A BOON FOR OLD AGE & HIGH RISK PATIENTS ON ANTICOAGULANTS-

Dr. (Prof.) N. P. Gupta, Professor & Head, Department of Urology, All India Institute of Medical Sciences, New Delhi, said Enlargement of Prostate is a natural phenomenon. Typically, 50% of the men above the age of 50 years suffer from this problem and 20 % will require surgical treatment. In the quest to search for a safer procedure, Greenlight KTP Laser has come as a boon for both urologists and patients. Laser Vaporization of Prostate can be carried out with minimal/ regional anesthesia. Being a bloodless procedure this technology is a boon for critically ill patients such as old & cardiac patients and patients on blood thinners & anticoagulants. Patients can go back home in 1 or 2 days, without a catheter and can return to normal activity early. In last 5 years, this modality has become the preferred choice of treatment worldwide and more than 3 lac procedures have been carried out. Though more expensive than TURP, it gives handful of advantages in comparison to TURP. Worldwide Greenlight Laser is an added armamentarium to an urologist in addition to TURP with its innumerable benefits. Greenlight is indeed a new hope to patients who have been suffering from this problem for a long time because of high risk for surgery and leading a miserable life. With this safer modality, no one has to stay on a catheter life long. Aging also brings along some associated problems such as high blood pressure, diabetes, cardiac and many more because of which they are declared high risk, thus becoming a challenge for the urologist and anesthetist. In addition as the age increases the power to heal also comes down. Urologists have to rely on medications to give relief, which may not be a long term solution. He also stressed that every male above the age of 50 must undergo check up for the diseases of the prostate gland.

Suffering from Enlarged prostate!!
Ask your urologist about
GREENLIGHT LASER*

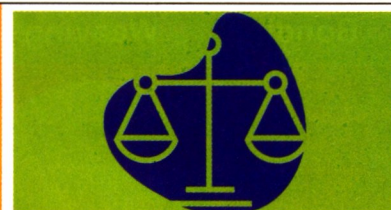

Advantages of Greenlight laser procedure

- Virtual Bloodless procedure.
- Extremely safe even for cardiac and old patients.
