

Haryana

The emerging education hub

Haryana's younger generation has a bright future. It is fast becoming a land of multiple opportunities and soon it shall be a major education hub of the country. Haryana, which was once considered a backward region of the undivided Punjab, has taken major strides in the development of infrastructure for higher studies. It is a leading state in providing quality education. It is the result of the consistent farsighted policies of the government.

Today, the government has adopted a multi-pronged policy to provide the best educational facilities. On one side, the private sector is being encouraged, while on the other, the state is spending huge money in establishing new colleges, universities and professional institutes of high standards. It has upgraded various institutes into universities. Besides, the Union Government has also set up several national level institutes in the state.

The advantage of proximity to Delhi has been astutely harnessed in the interest of the students. Quality

"Our government is making every effort to provide education to all children so that Haryana could be the leader in education too. We are providing free books to all students upto class 12 in government schools. We have provided eighty lakh work-books to students in schools. In order to constantly improve the teaching quality we are providing in service training to teachers. We are paying the best salaries to teachers at all levels."

— Bhopinder Singh Hooda Chief Minister Haryana

and modern education is being provided to students, which has manifold benefits for the state. It can now boast of a competent and educated workforce needed for the modern industrial ventures.

Rajiv Gandhi Education City

The Rajiv Gandhi Education City (RGEC), being set up at Kundli in Sonapat, will house world-class universities. The Haryana Urban Development Authority has already selected eleven sites for setting up world-class educational institutes. The RGEC has been envisaged as a hub for higher learning and a centre for research in cutting-edge technologies. Modern and job-oriented courses like avionics, environmental sciences, biomedical engineering, medical robotics, information technology, artificial intelligence, cutting edge engineering and technologies, management and finance, textile technology, biotechnology, nano-technology, defence research, art and cultural studies, habitat studies, film and media studies, pure sciences and fashion technologies will be offered
