

Sony 11-inch LED TV
Rs 1,19,000

Green Tech

Green was the colour of choice in 2008, with many products consciously choosing to lower the rate at which the world is warming up. LEDs (light emitting diode) emerged as one of the best eco-friendly products and everything from normal house lights to laptop screens and TVs were suddenly switching to them. LEDs consume little power and do not contain harmful chemicals. Elsewhere, the REVA electric car saw a relaunch, the Honda City went Hybrid, and companies like ITC opted for green buildings that use natural sunlight for lighting offices and consume less electricity and water.

Dell XPS1330 LED
Screen Laptop
Rs 58,385

Canon HG20
Camcorder
Rs 99,995

High Definition

If there was a buzz in display panels in 2008, it was about HD viewing. Colour TVs have become outdated and cannot provide HD picture quality like LCDs (liquid crystal display) or plasmas do. To support HD content on these many accessories are also going the HD way. First up are the Blu-Ray movies that support full HD at 1080P resolution. Sony Blu-Ray players became available in India this year. Gaming consoles have gone the HD way, too. Microsoft and Sony support HD gaming and even Blu-Ray discs can be played on Sony Playstation 3. Also in the market are consumer grade camcorders that are very compact and record video in full HD. Even TV channels are now jumping on to the HD bandwagon.

Sony
Playstation3
Rs 24,990
