

Touch Tech

It was certainly a touchy-feely year in the technology world. No one wants to press keys any longer. PDAs were the first to catch the fancy of finger-happy users. The HTC Touch phone came into the country with a bang and was a huge success. Soon after Apple's iPhone followed. Though the phone did not touch too many hearts, Apple forged ahead with the iPod Touch. HP gave the industry its first touch-screen desktop computer and tablet laptop. By the end of the year, music players to mobiles, all were going touch.

HP Pavilion
Desktop Touch
Rs 87,000

Nokia 6110
Navigator Phone
Rs 13,200

GPS

It was the year when everyone sought to go in the right direction. And showing the way was the Global Positioning System (GPS). It was not simply personal navigation devices, but mobile phones, cameras and laptops that sought to pinpoint locations of everything. Nokia came out with GPS and A-GPS enabled phones (followed by every other brand thereafter). Nikon P6000, a consumer-level camera, started automatically geo-tagging images with location coordinates. Laptops got GPS dongles to bring GPS navigation on the screen. And now there are GPS security devices available from SatNav that can be put in a car to identify its location if it were to be stolen. **by Sulabh Puri**

Apple iPod
Touch 8GB
Rs 17,000

Nikon Coolpix
P6000 Camera
Rs 22,000
