

Turning Dreams Into Reality

1. The journey of NRHM is a very unique one. Health is a State subject. The NRHM respects the leadership and decision making role of State Governments. It has been crafted in such an innovative way that States are happy to take ownership of the Mission. Today every State is trying its best to come up with the finest innovation that makes quality health care accessible, affordable and accountable. The unprecedented involvement of the State Governments is the biggest strength of NRHM. It is the States that prioritize on the basis of decentralized planning. They are encouraged to find solutions to their public health problems in their State specific contexts. The result of this relationship of trust with States and local institutions has been the unprecedented increase and improvement in access to basic health services.

2. Most States have reported improvement in number of outpatient cases, institutional deliveries, full immunization, availability of diagnostic services, family welfare services, disease control programmes etc. NRHM has unleashed a positive energy at every level of the public system. Poor people in remote areas have voted with their feet for the public system. The availability of the doctor, the drugs and diagnostics has remarkably transformed the utilization of services from public systems. Indeed NRHM is making a difference everywhere.

3. When States plan on the basis of felt needs they come up with very useful innovations. From cell phones with ANMs to emergency transport systems, innovative use of untied funds at various levels, a whole set of new way of constructing the public system of health care is being attempted. A good practice in a particular State today becomes the starting point of innovations in other States. If Chhattisgarh's Mitans excel as community health workers, they encourage other States to craft their community health worker programme in a similar way. Gujarat's success in physical infrastructure development of government health institutions has encouraged many other States to attempt a similar arrangement. Tamil Nadu's Medical Services Corporation is a beacon of good practice in procurement and logistics for the health system. Andhra Pradesh's emergency ambulance service that ensures availability of trained paramedic and ambulance in every village of the State within twenty minutes on dialing 108 has already been extended in many other States.

4. Assam's success with boat clinics in riverine areas; Bihar's successful PPP for diagnostic services; Chhattisgarh's system of ranking panchayats on human development; Tripura's efforts to involve doctors' association for ensuring posting in remote areas; Arunachal Pradesh's successful partnership with NGOs to run Primary Health Centres in very remote areas, have all become the symbols of change and reform.

WHAT HAS NRHM ADDED

1	Rogi Kalyan Samitis	547 DHs, 4038 CHCs, 662 other than CHC Hospitals, 16735 PHCs have then own Rogi Kalyan Samitis with untied funds for improving quality of health services.
