

REPRODUCTIVE AND CHILD HEALTH PROGRAMME – PHASE-II

Unprecedented demand for institutional deliveries under the Janani Suraksha Yojana.

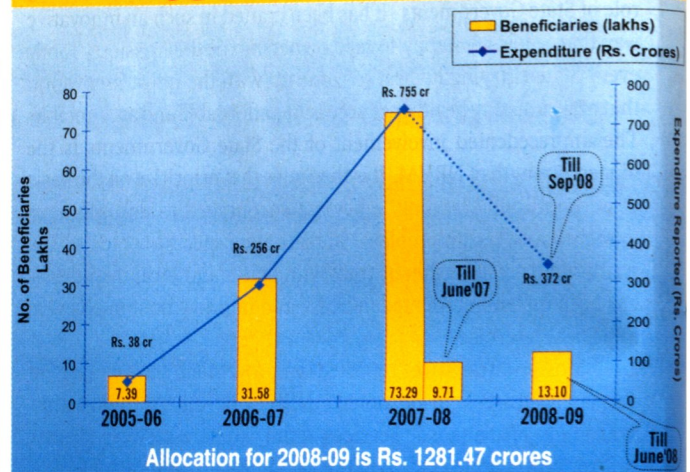

MONTHLY HEALTH DAY IN VILLAGE

More than 88 lakh Monthly Health Days have been organized at Anganwadi centres, facilitating care during pregnancy and after childbirth, immunization of children and pregnant mothers, distribution of basic drugs, and information about basic health care, hygiene and sanitation etc.

The idea is to fix a particular day every month, with advance notice and publicity, so that people around the village make it a point to attend and avail of basic services. Almost all the states, including Tripura, Orissa, Madhya Pradesh, Rajasthan, Chattisgarh are organising them.

With Village Health & Sanitation committees being set up in every village, the focal point of health measures will be the Monthly Health Day in the village.

JSY PERFORMANCE

IMMUNISATION

Coverage Evaluation Survey (CES) conducted through UNICEF in 2006 covered the initial period of NRHM, showed a 8.7% increase in full immunisation over CES 2005. Several weak states showed improvement in full immunisation coverage. Reports from states are also showing improvements in coverage. District Level Household Survey (DLHS-3) has also shown encouraging trends in immunization.

During 2007, Japanese Encephalitis Vaccination extended to 28 districts 10 states. Neonatal tetanus has been eliminated in 7 States.

For immunization during Monthly Village Health & sanitation Days, Anganwadi workers and ASHAs are mobilising the community. The additional ANMs are also active in Immunisation process. The service delivery of vaccines have improved, so are

the catch-up rounds with better supervision and monitoring. Introduction of Auto-disable syringes and alternate vaccinators have had a very good impact on the immunization.

MOVEMENT AGAINST USE OF TOBACCO

The movement against use of tobacco has gained tremendous momentum. The new law, coming into force on 2nd October 2008, has made all public places completely smoke free. Only restaurants with 30 covers or more, hotels with 30 rooms or more and Airports have the option of creating smoking rooms as per the law.

TB CONTROL PROGRAMME

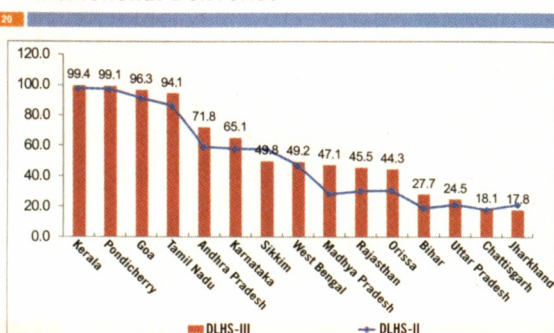

More than 8 million patients put on treatment since start of Revised National Tobacco Control programme in 1997: NSP case detection rate for 2007 was 70% (Percentage of new TB cases out of total TB cases which were detected by RNTCP); Treatment

EVIDENCE OF EARLY GAINS

Gains under NRHM

- | Indicator | Details |
|---------------------------|---|
| 1. Infant Mortality Rate | IMR down to 55. Down by 2 points in 2007 as compared to a point a year in earlier years (2003-2006). Possible to achieve the required reduction of 4-5 points a year to reach 30 by 2012, if neonatal mortality is effectively addressed through 48 hour stay after institutional delivery. |
| 2. Institutional Delivery | Increased by 66.4% in MP, 50.2% in Rajasthan, 47.3% in Bihar, 43.8% in Orissa, 20.9% in Andhra Pradesh and 12.4% in Uttar Pradesh between DLHS – II (2004) and DLHS – III (2007). Significant gains in hitherto low performing States with high maternal mortality. |
| 3. Immunization | Full immunization increased from 20.7% to 41.4% in Bihar, 25.7% to 54.1% in Jharkhand, 30.1% to 36.1% in MP, 53.5% to 62.4% in Orissa, 23.9% to 48.8% in Rajasthan 25.8% to 30.3% in UP between DLHS – II and DLHS-III (PROV). |
