

MENU FOR A SCAM

What SFIO sleuths, investigating agencies and market analysts have are scenarios based on a combination of facts and hypotheses

Scenario I Forgery Inc

The scam team forged invoices to show collection of revenue abroad, forged bank statements to show inflow of money, showed transfer of money to fixed deposits (FDs) through forged FD receipts and reflected all this in the final accounts. The assets and liabilities were altered Q2Q to reflect rising income and rig share price.

CAVEAT This would require matching of revenues with staff strength and salary costs. Would also require forging of TDS certificates for income from FDs.

POSSIBILITY High, as there is logic and objective.

Scenario II True Lies

Satyam did make money on exports. Raju raised invoices for exports abroad; money did come through the banking channels and was transferred to long-term FDs and reflected in the books. Once the FDs were recorded in the books, the deposits were dissolved and money transferred to multiple accounts. The books continued to reflect the FDs as you don't need to surrender certificates anymore. Siphoned money was used to acquire land, property, pay for political patronage for Maytas Infra and Maytas Properties.

CAVEAT This again requires forging of TDS certificates for accrued interest and connivance of auditors.

POSSIBILITY Very high

Scenario III Hawala Inc

Raju receives political slush money abroad, brings it in as invoiced billings, shows it in his books and transfers it to FDs to be dissolved later. The money transferred to multiple accounts is siphoned to repatriate politicians' money and for funding the activities of Maytas.

CAVEAT Have to show staff strength to match revenues or ramp up operating margins. Besides co-opting auditors and forging TDS certificates.

POSSIBILITY Very very high. Is in sync with whispers of pressure to pay politicians and patronage.
