

A DREAM FULFILLED A THOUSAND LIVES TRANSFORMED....

Sometimes it takes a terrible tragedy to help us discover the true strength of our spirit...and the purpose of our lives. The story of the Indian Spinal Injuries Centre, is the story of one man's journey of faith and accomplishment and dedication.

Major Ahluwalia was just 26 years old when he scaled the Mount Everest. A few months later, he was wounded in the Indo-Pak war which confined him to a wheel chair. To his dismay, there were no specialized hospitals for people with spinal injured in India. Determined to rebuild his life, he traveled to the UK, to undergo intensive rehabilitation at the Stoke Mandeville Hospital. This life transforming experience determined him to set up a similar hospital in India. In the early 1990s, The Indian Spinal Injuries Centre was set up in collaboration with the Government of Italy, through San Raffaele Hospital, Milan, with support from the Government of India. Today it is a model institution comparable to the best in the world. A 153-bed hospital, it has 30 beds reserved for poor patients. This hospital provides the best medical care, free of any discrimination. With the latest state-of-the-art diagnostics and surgical equipment and a highly qualified world class team of doctors, surgeons, physiotherapists, ISIC has become a major referral centre with patients from all over the globe.

VISION:

- To develop the highest standard quality service delivery program for patients with spinal injuries and other spinal ailments.
- To become a globally affiliated center for the development of the highest quality human resources, by setting up world-class education and research facilities.
- To apply the latest medical technology and explore all possibilities in the uncharted areas.

MISSION

- To become a center of excellence and an apex referral center in Asia.
- To set up collaborations with other leading institutes from around the world and participate in global research in the field of spinal injuries.

- To serve the needs of humanity and deliver the highest quality care to the poor.

Our Core Values & Commitments

- To strive to bring awareness in the field of disability and lobby with policy makers to introduce suitable legislation for prevention of disability and enforcement of the Equal Opportunity Bill.
- To put strong emphasis on education programs with a focus on graduate and post-graduate courses in Rehabilitation Sciences.

Major Ahluwalia used his own experience to provide the architects unique insights into the problems faced by patients and help to find optimum solutions. It is the only hospital in India that is totally barrier-free and has the unique advantage of providing everything that a patient would need under one roof.

PROBIOTICS FOR A HEALTHY LIFE

Probiotics are defined as "Live microorganisms which when administered in adequate amounts confer a health benefit on the host" (WHO / FAO). They are the beneficial bacteria that promote a healthy digestion and build immunity. Two of the most common strains of probiotics are lactobacilli and bifidobacteria found in many food products today. The concept of adding probiotics to daily diet is fast catching on in India with global probiotic products like Yakult entering the Indian market.

In 1935, Dr. Shirota developed "Yakult", the first probiotic drink that contained L. casei strain Shirota. He observed that daily intake of this product was beneficial to intestinal health and prevented diseases, thus prolonging an individual's life span.

Probiotics in today's life

Statistics show that a third of the urban Indian population is prey to digestive disorders or lifestyle ailments. Ever increasing stress, irregular eating habits, excessive travel, indiscriminate use of antibiotics, junk food are factors that contribute to this alarming trend.

Daily intake of probiotics provides our system with friendly bacteria that helps keep the harmful ones at bay. By maintaining a healthy balance of gut flora, probiotics enable the body to improve its own natural defenses. In addition research has shown that they -

- Improve digestion of Lactose and reduces intestinal bloating, flatulence and constipation
- Prevent traveler's diarrhea, antibiotic associated diarrhea, infectious diarrhea
- Enhances the immune system and improves resistance to infection
- Reduces allergic reactions by improving the mucosal barrier function
- Protects against certain types of cancer such as bladder cancer, colon cancer etc.
- Helps in prevention of Irritable Bowel Syndrome and Inflammatory Bowel Diseases (IBD) such as Ulcerative colitis and Crohn's disease.
