

Heat generating food is strictly prohibited and fresh herbs, juicy fruits consumption along with good intake of fluids in the form of water and fruit juice can help bringing down overall body temperature.

Use of fabrics like crisp cotton in pastel hues is another solution to combat rising temperature while remaining effortlessly stylish.

While food, drink and apparel are fantastic; it's the sumptuous interiors that are creating the entire buzz. Air Conditioners are the best friends in summers. Earlier, air conditioners came with the sole purpose – to beat the heat. They could be used only in summers to beat the scorching heat, but with technological advancements things are very different today.

Now air-conditioners come loaded with host of features – they can change their temperatures automatically with the change in outside temperatures, they can also be used in winters with the temperature in the room so maintained that

These can be fitted in homes where each room can have a separate unit. In Split form or PTAC form, there are two units. The Evaporative unit in this kind of AC is outside the room and the condensing unit is inside the room – a tube passes through them connecting the two units. (Some of the Split ACs is quite advanced in nature; they can heat the room in winters making these much better air conditioners than the walled units – one of the main reasons why these are costlier than the window air conditioners).

Another class of air conditioners is the central units – used mainly in hotels, restaurants, and corporate offices. In these air conditioners, ducts are used to throw in the cooled air to keep the temperature cool or heated. Such kind of units can do both the functions – keep the temperature low in summers and high in winters, keeping the dual purpose in full swing throughout the year.

Today's world of latest technology has created such gadgets which helps people to stay cool in this summer. Samsung hold's the distinction of being Asia's top brand in the Consumer Electronics has come out with its commitment of delivering technologically advanced and innovative products. In line with its commitment to bring the best products to India for this summer, Samsung has introduced its new Bio Sleep Plus range of Air Conditioners. The new

one feels at ease; even in rainy season humidity can be controlled in rooms with these air conditioners. Different companies have come up with different sub-brand names for their air conditioners- Intello Cool, Bio Sleep and so on.

These air conditioners are not just an added feature in the room interiors; they have gradually become a part of life. At the basic level, air conditioners come in two forms – Walled units and Split form. Walled or Unitary systems are fitted across the windows of the room whose controls are interior.

Smart Saver saves you from those heavy electricity bills.
