

"Today we can boast of an up to date IT centre where we can track each and every of our 1.56 crore consumers. And then once in 2 months we conduct multilayered counter checks on the doubtful consumption cases."

Mahavitaran had been striving hard to have a complete energy accounting of its system. With it came a system of setting up of meters on around 10240 feeders.

It was during this time that Krishi Swabhiman Yojna of October 2007 had begun, specifically targeting towards regularizing illegally extended agricultural load. This yojna has helped MSEDCL to earn Rs. 26 crores every year thereafter.

MSEDCL due its improved systems has reached a collection efficiency of 98% from the inherited 89% increasing its average monthly revenue from 1100 crores to 1600 crores.

Various measures to improve collection efficiency were set up like billing period reduced by a month in both urban and rural areas, improved payment facilities like All Time Payment (ATP), internet payments, rebates for quick payments etc., and finally connections were also promptly disabled in case of non payment.

The concept of distribution franchising was first introduced by MSEDCL. A public private participation policy was set up. Bhiwandi is first of its kind handed over to M/s Torrent Power with an 'Input based distribution franchisee model'. The result is that collection efficiencies improved in that area.

MSEDCL has formulated a huge infrastructural plan of about 9000 crore to be completed before 2010. Under this plan, 565 substations, 53293 KMs of HV lines, 63598 distribution transformer centres are going to be installed. In the first phase, 119 projects have already been sanctioned and work orders of 3000 crores have been placed. In the phase 2 the balance work has already been tendered.

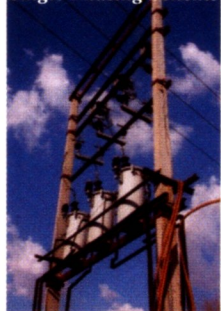

Demand and supply gap with anticipated projections till 2012

Year	01 - 02	02 - 03	03 - 04	04 - 05	05 - 06	06 - 07	07 - 08	08 - 09	09 - 10	10 - 11	11 - 12

Shortfall	1016	2421	2042	3045	4205	4527	4625	4700	4100	3200	+(650.00)

There is a shortage today of about 4000 - 5000 MW of power. Addressing this need of the rural, urban, industrial, agricultural and commercial consumers was the next step. The increasing demand of the consumer and inadequate supply was the challenge faced by MSEDCL. Separate tenders have been raised from various power generation companies, to meet this demand. The challenge undertaken by MSEDCL is to break-even the shortage faced today by year 2012.

To address the power shortage, a scheme was planned for separation of feeders for agricultural pumps. Also, separate feeders were developed and proper Load management schemes were ensured.

Single Phasing Scheme

The single phasing scheme has been completed in 12011 villages that benefit 10 hours of single phase and 7 hours of 3 phase power supply. Gaothan Feeder Separation Scheme (GFSS) for 16231 villages planned wherein work of 4300 villages have been completed at the end of September 2008. Villages now get electricity of around 18 -19 hours. On completion of the scheme, in some 28000 villages load shedding will come down to almost 50% which is on par with urban areas.

MSEDCL has also been making efforts to reduce the supply and demand gap. It has entered into a number of PPA's with public and private sector companies. The PPAs for 1900 MW from UMPP of central govt. have been signed. This power will be made available after 2012-13. The Mundra - 800 MW, Krishnapatanam - 800 MW, Jharkhand - 300 MW, M/s Adani Project - 1320 MW, Ms Lanco Chhattisgarh - 680 MW were signed. This is in addition to the complete power generation by our sister company MAHAGENCO.

Also, it was felt that to bring in motivation, employees had to be made more accountable. Professional people from outside were employed at required stages by skilled and competent personnel.

"33% of our Senior posts (EDs, CEs and SEs) were being filled by direct recruitment, the existing employees also had a chance to compete, which was filled in by a professional recruitment agency"

A new performance appraisal system was introduced for employees. Specific target on billing efficiency, reduction in distribution loss etc were given. Thus, by building in better systems and getting each one more accountable, MSEDCL gets in the desired motivation amongst its 64000 employees to build a better state.

"Its is estimated that by the year 2012 we will achieve break-even in the demand and supply gap of the power scenario" excerpts Dr. Pandey
