Would you have thought that a satellite and some enterprising Indians could change the meaning of a visit to the doctor? This is what medical transcription enabled. Doctors in the US just "pick up the phone and everything they say is picked up by companies here, who transcribe the data," explained INDIA TODAY in August 1997, when the technology was launched. This made studying medical reports and prescribing medication much easier.

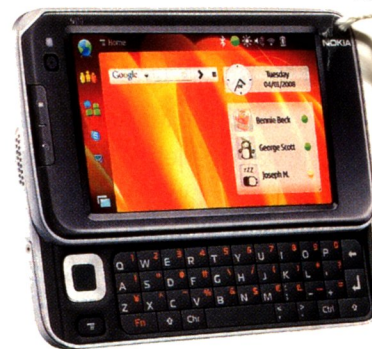

7 Cause to Paws DNA fingerprinting

In 1989, science presented mankind with another gift. It enabled parents to know if their child was truly theirs and also became a foolproof way of solving murders. "Nature's photocopying machine, DNA, kept its secrets well for centuries. Scientists are now beginning to crack its blueprint," said an INDIA TODAY report in March 1996 about DNA fingerprinting. The Naina Sahni murder in 1995 set the ball rolling for the technology. Now, "apart from forensics, it is involved in the ambitious study of genetic diversity among Indian tribals along with the Anthropological Survey of India. Similarly, the DNA typing of animals is underway in order to conserve endangered species," said a report in August 2008.

8 Net Meet Video-conferencing

Video-conferencing became popular in 2000. In 2007, INDIA TODAY quoted Saurabh Gupta, state informatics officer, Bihar: "There are many good teachers but students of other universities can't gain from their knowledge. So, we use this facility."

9 Web of Wonders WiMax Wireless

"It allows cellphone users to download data at 2.5-3 MBPS while the current data download capacity is only 134-256 KBPS," noted INDIA TODAY in 2005 when this technology was about to enter the Indian markets. Also known as the last-mile connection, the broadband technology extended the benefits of connectivity to rural areas and long distances.

10 Size Matters Nanotechnology

Nanotechnology was "2001's top scientific achievement," said INDIA TODAY in its January 2002 issue. A nanometre—a billionth of a metre—was the smallest, yet the biggest breakthrough the year could have gotten. The tiny miracles were no longer a matter of science fantasy.
