

The only way to survive city congestion is to spark a **METRO REVOLUTION** with the Centre and the states working together

ARJIT SEN

A revolution on a railway track. It's that straightforward. Engineering a success story for urban India's daily traffic battles is simple. The answer has already presented itself in the Capital through a mass rapid transit system built by the Delhi Metro Rail Corporation (DMRC). It's a blueprint that has to be implemented in the rest of the country.

The speed at which cities are expanding combined with the sheer number of vehicles joining the road war everyday has left cities

choked and strained infrastructure to the breaking point. It has made it crucial for the public transport system in each city to go into high gear and respond to this need. But the only way to discourage the use of private vehicles is to provide alternatives—ones that are safe, reliable, fast and easily accessible. That is where a rail-based transit system taps into a metropolis' needs, becoming the lifeline of its economic activities.

Any city with a population of more than three million and where any transport corridor sees a density of more than 8,000-
