

Human Resources :

idea-5 Do you know India is 12th richest country in the world of 200 plus countries, sitting only next to America, Britain, Japan, Germany etc? But when you divide India's total yearly income by 116 crores of population, its rank in terms of income per head is falling to 160th, sitting next to Somalia, Bangladesh etc poor countries. Illiterate & poor families are giving birth to 3 to 4 children, where as it has become a fashion for educated & rich families to stop production with a single kid. This is creating a big imbalance between the ratio of poor & rich. **To control population, Government is offering incentives worth of a thousand or 2 thousand rupees to poor people, which failed to attract even beggars. A minimum of Rs.25,000/- spot cash is to be offered to make the offer irresistible** to below poverty line (BPL) families, based on their ration card category, if they stop with one child. It should be Rs.50,000/- for above BPL people & no incentive for middle class & high class category card holders. By paying Rs.25,000/- now, we can get rid of those lakhs of rupees of future expenses per each unwanted & unproductive extra citizen.

idea-6 Do you know, how many thousands of crores are we losing to let 2 crores of illegal immigrants from Bangladesh, Burma, Sri Lanka etc into India? Do you know, our Government does not know who paid tax & who has not. Do you know that there are thousands of properties that have 2 or more registered owners, simultaneously, with out knowing each other? Do you know how many thousands of crores our banks lost due to non repayment of loans? To solve all these problems, we should first issue Citizen Cards to all Indians. By entering this card number, anybody can view details of that particular citizen like his photo, contact details, thumb impression, signature, amount of tax paid & due, his properties, loans taken & its repayment history, contaminable diseases, criminal record, ration card & other cards' details, etc. A web portal will contain details of all 116 crores of Indians' details.

idea-7 We prefer small green grapes, as eating black grapes with seeds is difficult. To get the nutritional values of both kinds of grapes, scientists produced small black grapes with out seeds by crossbreeding black & green grapes. To produce more healthy grains, fruits & vegetables, we are implementing crossbreeding. But, when it comes to human beings, we are crossing only in between same caste & same region fellows since thousands of years. **As there is no access to new genes, we are giving birth to dull brains with weak bodies, which gets eye sight problem in high school, white hair in graduation & diabetes at the age of 30 years.** To solve this problem, Government should conduct a powerful campaign against marriages among same caste & same region by explaining the side effects. Remember, no country can become a super power with out giving birth to super brains & healthy bodies.

Law & Justice :

idea-8 A Judge attends roughly 200 cases a day. A complainant, an accused & their advocates (total 4 persons) should attend in each case on call. This call work (taking attendance from 800 persons) will be finished by lunch time. 90% cases will be adjourned for another date. Remaining 10% cases will be called for the trial after lunch, as the Judge can't conduct trial for 200 cases in a single day. This way, we are wasting half day everyday. **By transferring this attendance marking job to the clerks, all these thousands of judges can double their productive trial hours.** So that, Judges can start trial sessions right from the first hour in the morning. Since long, clerks are doing this call work job but only when the concerned magistrate is on leave. So, it is not going to be an unfamiliar job for clerks. By implementing this idea, we can bring down the case disposal time from the present 3 plus years to 18 months.

idea-9 Only fools approach courts for justice, as our judiciary treats both complainants & accused as slaves. Go to any court in India. You will see how these Magistrates & Judges treat the people. You have to stand there from 10.30 am to 5.30 pm. You can't go for toilet also, as you don't know when the Judge will call your name. You will find neither a chair nor a fan. Advocates also play their role by injecting a feeling in you that it is purely your obedience to the Judge that decides the judgment. Court summons every complainant & accused for about 40 times. Out of this 40 times, more than

30 times they will call you just like that, with out any work. **Trial will be finished in the last 5 to 7 sessions. Then, why courts are calling these people to attend the court for 40 times? It is only to benefit the advocates, as we pay advocate's fee 40 times, of which 30 times payment is only to get attendance in the court.** If our Judiciary really feels that these complainants & accused also are human beings & attach any value for their money & time, immediately they should provide a slot time, (Ex: 11.30 am to 1.30 pm), instead of asking them to be at the Judge's disposal from 10.30 am to 5.30 pm and bring down the attendance sessions from the current 40 or unlimited to 10. By taking the help of technology, we can resolve unnecessary sessions & slot time problems.

idea-10	Offence	: Public nuisance
	Punishment	: Rs.100/- fine.
	Criminal's income	: Rs. 12 lakh p.a.

How can a court impose same fine amount to punish a Rs.2000/- monthly earner & a millionaire? Fine amount should deter the offender & stop him from repeating it & should be a lesson for the potential miscreants. So, fine should be in terms of percentage of the criminal's family property and or previous year's family earnings. To get income & property proof certification, we should start using our Notary network efficiently. It is only possible by severely penalizing notaries who take bribe & attest fake certificates. We also require rewriting all our British time laws.

Medical :

idea-11 It is well known that doctors get 50% commission on all lab test bills & on some medicines. **They prescribe & suggest unnecessary medicines & tests only for commission. So, no Doctor should be allowed to suggest names of medical shops & labs on the prescription. Hospitals & clinics should not be allowed to have attached medical shops & labs.** MRP should also be fixed for all kinds of lab tests & treatments, including surgeries. Government should release a list of diseases for which surgery is required by quantifying the required circumstances. Ex: surgery for kidney stones is required only if the size of the stone is more than 7 millimeters.

Agriculture:

idea-12 **Total demand for sugar for 2009: Five crore tons.**
Total supply for 2009, as of now: Seven crore tons.
 Expected production by the end of 2009 from new farmers, who are unaware of above figures: Two crore tons.
 Consequence: Farmers' suicides, agitation for high support prices, grant of fresh loans & waiver of repayment of previous loans because of over production.
 To stop this nonsense, **Government should direct all farmers to inform Agricultural Department about the place, size of land & type of crop they are going to cultivate in that season.** Farmers can get a print out from their Village Panchayat office by paying five rupees, which will contain details like: so far how many hectares of land is being occupied in cultivating that particular crop for the running season, current state wise areas of production, suitability of that land for that crop, expected demand for that crop in that season and previous year's supply, demand & market price. **Farmers, who start cultivating a crop in which supply is exceeding demand, can't avail agricultural loans & won't be eligible for subsidies in fertilizers & seeds.**

Rural development :

idea-13 **To discourage further concentration of economic power in few metros, we should permit upcoming projects like medical tourism, SEZs, new industries etc to be set up either in 2 tier or 3 tier cities.** We should not offer any benefit to new projects in metros. This step results in big villages becoming towns, towns becoming cities & cities becoming metros. Finally, it discourages immigration from rural to urban areas.

Government administration :

idea-14 When all reputed private organizations can benefit by ERP, why not the Government? For better utilization of our scarce resources, **we should make use of ERP for the optimal Government administration.**
