

easily broken down into free fatty acids and glycerol by the enzyme lipoprotein lipase (LPL). The free fatty acids (water insoluble) bind to albumin and are slowly transported to the liver. And glycerol is transported to the liver via the interstitial fluid, compartments tissue fluids and blood fluid, and excreted in the normal process.

**Wrinkle reduction / face lifting / eliminating stretch marks:**

FIR Stimulates the growth of collagen while overcoming the side effect of other existing methods like laser and IPL treatment, which don't have enough energy penetrating into body depth with possible prevention from pigmentation & melanin. So we can acclaim Blizz Biosculpt SPECTRAL FIR is a perfect technology for improving dermal collagen. Firstly, the contraction of collagen caused by

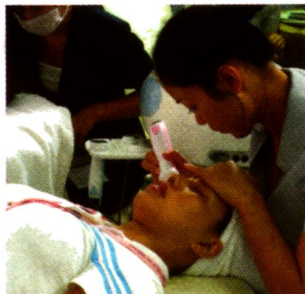

*Before Treatment*

*After Treatment*

SPECTRAL FIR working on collagen fibrous layer makes the skin tightened, wrinkles of face and body eliminated. Then the heat transmitted into dermal layer stimulates the rebirth of new collagen to repair aged and damaged collagen layer.

**Blizz Bio-Sculptor can remove black circles and pouches around eyes**

The Blizz SPECTRAL FIR energy works from inside to outside to enhance blood circulation & metabolize and eliminate black circles. And at the same time, fat is dissolved by the energy where the eye pouch is removed. The new growth and reinforcement of collagen helps in improving the relaxed skin and removing the wrinkles.
