

Steel Authority of India Limited

"A leader in steel : through quality, productivity and customer satisfaction"

MARKET

In metaphorical terms steel is found in exceptional people in varying proportions: for instance, nerves of steel or a steely resolve or the fortitude of steel. In literal terms, however, steel simply drives a country's economy and is, often, the scale by which its well-being is measured.

The country, today, is the fifth largest steel manufacturer in the world with an annual crude steel output of over 50 million tonnes. By 2015/16 India is projected to become the world's second largest with an annual production of 137 million tonnes. If the NSP figures are to be met then India will nearly double capacity in the five years after this. In other words it will do in a half decade what the country has achieved in the last 100 hundred years.

The Steel Authority of India Limited (SAIL) is among the top businesses in the country. It had a turnover of Rs. 45,555 crore and profit of Rs. 7,537 crore in 2007-08.

ACHIEVEMENTS

SAIL has been a part of India's growth story since Independence. Today SAIL produces the widest range of quality steel products in the country. The consuming industries for these products include construction, heavy engineering, power, defence, railways, oil and gas, transportation and the automotive sector.

SAIL's manufacturing units are spread across India – five integrated steel plants at Bhilai, Durgapur, Rourkela, Bokaro and Burnpur producing carbon steels and three plants at Salem, Durgapur and Bhadravati manufacturing special steels. It's subsidiary at Chandrapur produces Ferro alloys.

Operating at 118% of capacity, SAIL units produced 13 million tonnes of saleable steel in 2007-08; in the process they contributed more than one-fourth of the country's total requirement of crude steel and 100% of the track requirements of the Indian Railways.

The captive mines of SAIL met the entire iron ore requirement of the company's steel plants by producing 26 million tonnes of iron ore during the year.

SAIL is not just about exploding production. The company has kept a careful watch on costs, too. During 2007-08 through various measures and by improving techno-economic parameters the company improved profitability by Rs. 328 crore. Mainly through higher yield, better TE and productivity parameters, lower power & fuel consumption, reduction in arising, optimization in procurement etc. In the process SAIL reached a number of milestones: it recorded its lowest-ever energy consumption of 6.95 giga calories per tonne of crude steel; improved blast furnace productivity to 1.5 tonnes/m³/day and logged 1134 kilos of metallic input. It also achieved the best-ever average labour productivity of 214 tonnes per employee during the year across all its units and 289 tonnes at Bhilai.

On the distribution front, SAIL simplified steel buying by providing internet-based facilities through its online e-store. The company offered door-to-door delivery to small house-builders in the National Capital Region of Delhi and Kolkata while the other parts of the country continued to be supported by a huge distribution infrastructure. In its endeavor to reach steel closer to doorsteps of consumers, marketing network was expanded to cover all the 603 districts in the country, SAIL being the only steel company to achieve this rare distinction. Distribution network of SAIL expanded to every district of the country; with 1200 dealers added during the year 2007-08 and total dealers reaching 1897 nos.

In recognition of its performance and service rendered SAIL has won several prestigious awards.

Hon'ble Prime Minister Dr. Manmohan Singh inaugurates expansion & modernisation programme of SAIL's Salem Steel Plant, UPA Chairperson Hon'ble Smt. Sonia Gandhi, Hon'ble Union Minister for Chemicals & Fertilisers and Steel Shri Ram Vilas Paswan, Mr. S. K. Roongta (Chairman SAIL) and other dignitaries are also present.

Shri. S. K. Roongta (Chairman SAIL), receiving the All India House Journal- 1st prize for Ispat Bhasha Bharti, the Hindi magazine of SAIL from Hon'ble President of India Mrs. Pratibha Patil.

HISTORY

It was Pandit Nehru's belief that dams and factories were the temples of modern India. He took it upon himself to give India the foundation for it to become self-sufficient in all aspects. This vision inspired the builders of modern India to create the right fundamentals for the rapid industrialisation of the country. The
