

steel sector was given priority since it was perceived as a key driver of economic growth. With this, as the view, Hindustan Steel Limited (HSL) was set up by the Government of India to manage the country's first steel plant in the public sector at Rourkela. In April 1957, the supervision and control of the steel plants coming up at Bhilai and Durgapur were also transferred to HSL.

In 1972, SAIL was created as the holding company for all HSL steel plants. SAIL was incorporated on 24th January 1973 and was restructured as an operating company in 1978. Today, it rules over eight steel plants and runs a subsidiary which produces ferro-alloys. The company marks 2008 as the golden jubilee year.

PRODUCT

The company has made continuous improvements in its product-mix and quality. A major drive has been made to produce special steels and value-added items. Thanks to these efforts the company recorded substantial growth during 2007-08.

Equipped with the latest steel-making technologies, SAIL plants produce more than 50 different types of products ranging from hot rolled and cold rolled sheets and coils to galvanised plain and corrugated sheets; from rails, wheels, axles and reinforcement bars to rods, electrical plates, pipes and structural in more than 500 different specifications and grades. These have met the exacting requirements of both domestic as well as overseas customers. With the widest product range among Indian steel producers, SAIL offers 50 mild, special and alloy steel products in 1000 different qualities and 5000 dimensions.

SAILCON, a unit of SAIL, is a single-window consultancy providing design, engineering, technical, management and training to the iron and steel sector. The company's Management Training Institute at Ranchi undertakes management research and provides consultancy in areas of management, HR, etc. SAIL's Research & Development Centre for Iron & Steel, also at Ranchi, undertakes research projects in diverse segments of iron and steel technology and offers technical services to other organisations. The Centre for Engineering & Technology of the company is the design, engineering and consultancy hub of SAIL and provides a complete range of services to Indian and international clients.

RECENT DEVELOPMENTS

SAIL has taken several strategic initiatives to consolidate its position as market leader and to achieve production targets. A Memorandum of Understanding has been signed with Tata Steel for development of coal mines; joint venture company formed to set up cement plants at Bhilai and Bokaro; steel processing units are being set up in different states; a Special Economic Zone has been commissioned at Salem and an MoU with the Indian Railways has been signed for the construction of 235 kilometres of new tracks in Chhattisgarh.

To inject greater efficiencies in its operations, material management, customer relations, finance and personal, SAIL has strengthened its IT communications network by introducing IT-enabled processes.

A Key Account Management system has been introduced to provide major customers a single-window support from managers appointed at the branch and regional levels.

SAIL is also implementing ambitious expansion and modernisation plans to keep pace with growing demand for steel. Project orders placed for investments over Rs. 20,000 crore during the year.

Hon'ble Union Minister for Chemicals & Fertilisers and Steel Mr. Ram Vilas Paswan handing over a cheque for Rs. 638.04 crore to Hon'ble Prime Minister Dr. Manmohan Singh as final dividend to the Government of India for FY '08 on behalf of Steel Authority of India Limited (SAIL). Present on the occasion were Secretary (Steel) Mr. P.K. Rastogi, SAIL Chairman Mr. S.K. Roongta and other senior officials of the Steel Ministry and SAIL.

PROMOTION

An eclectic mix of internal and external communication activities are used to promote and increase awareness of the company's steady growth. SAIL conducts periodic media campaigns to reinforce the image of the organisation as a company with strong fundamentals and a bright future, both through print and electronic media as well as ambient advertising. Trade fairs have been used to strengthen the image of the organisation among stakeholders and the general public.

Internal communication, apart from tent cards, posters and electronic boards is supported by the in-house publications, including SAILNews and other plant magazines. These help ensure free flow of communication and keep employees involved in the activities of the company.

The SAIL brand recorded an all-time high recall when the company launched an ad campaign with the tag line 'There's a little bit of SAIL in everybody's life.' This campaign was a huge success and played a major role in making SAIL not only a household name but also a symbol of national pride.

The company has been able to achieve a higher level of recognition and greater value by branding some of its products for the market place. Today, SAIL-TMT reinforcement bars and SAIL-JYOTI galvanised products have become items of choice for steel consumers, even in remote locations of the country.

The company seeks to exploit every opportunity of strengthening its relationships with its employees and its clients. It has, therefore, taken its golden jubilee celebrations as yet another means to achieving the end. A composite corporate logo has been implemented across all SAIL plants and units to facilitate brand identification.

BRAND VALUES

SAIL's vision is to be a respected, world-class corporation and a leader in the Indian steel business. Its brand positioning as being a part of every Indians life has reiterated its perception of a company that is the pride of the country.

SAIL aims at creating value through quality and trust; it aims to nurture a culture that supports flexibility, is proactive to change and makes a meaningful difference to people's lives.
