

## Alternative Energy: Securing India's Energy Future

### BUSINESS TODAY-DUPONT SUSTAINABILITY FORUM

Global oil prices have yoayed dangerously over the last six months. Such volatility, driven both by rising demand and high levels of speculation, is causing

great stress to the country's fiscal position as well as to household budgets.

It is critical for the world, and India, to quickly develop or find alternatives to oil. But the big questions are: Can Alternative Energy sources like the sun, nuclear energy, biofuels, wind power and fuel cells really help India secure its energy future? More importantly, given the levels of technology available at present, or likely to be developed in the foreseeable future, can they really offer economically viable alternatives? How can industry help speed up the development of alternative energy sources? And what must the government do to create an enabling environment for the development of these technologies?

To find out answers to such, and many more, questions, Business Today, India's leading business magazine, and DuPont, one of the world's leading providers of sustainable solutions, bring to you a series of Sustainability Forums.

DuPont Solutions for a Better,  
Safer, Healthier World
