

OPEN SCIENCE GROWS MEGAHARVESTS.

Open Science uses the power of collaboration to do extraordinary things. India has the challenging task of feeding 16% of the world's population using less than 2% of the world's land. To that end, the DuPont Knowledge Center at Hyderabad is forging R&D partnerships with local universities, while DuPont India is working with farmers to increase rice and corn yield through performance seeds and sustainable crop protection technology. We believe it's collaborations like this that can help solve the biggest challenges of our time. In other words, science that's open, opens up possibilities for people everywhere.
