

YAMAGATA UNIVERSITY – ACT GLOBALLY BASED LOCALLY

Yamagata University is a leading national university corporation with about ten thousand students in the northeastern region of Japan. Focusing on our slogan "Act globally based locally," we have been committed to better education, research and society.

President Akio Yuki says, "Students are the principal actors of university, and must be considered the most important." We aim at creating a university whose graduates say, "It's a very good thing I went to Yamagata University!"

At present we have one hundred seventy international students from various countries. They enjoy their academic life fully in a relaxing atmosphere as Yamagata prefecture is a sparsely populated, laid-back kind of place with an abundance of nature: hot springs, rice paddies, wildlife, mountains and rivers. If you like to study calmly in Japan, let's study at Yamagata University!

Some Universities readily admit students on the basis of performance at Entrance Examination to Universities (EJU); a common national level test conducted by Japan Student Services Organisation (JASSO) in several countries including India.

Special Training Colleges and Colleges of Technology usually prefer some knowledge of Japanese and yet some don't.

Government administered routes often specify subjects in which support will be given. You may not find your chosen subject in the list.

When you go to the next step and search for names of institutions you will be able to short list institutions depending upon whether you know Japanese, you have taken EJU, JLPT, etc.

FINANCIAL SUPPORT

There are mainly two routes that can financially support your study in Japan; the limited government scholarship route and the other expanding so called 'self financed' route for financing your study through loans, private foundations, local and other non governmental scholarships that become available once you have got admission in a Japanese institution. Known schemes under both the routes are mentioned in section Please note that more and more Indian students are going to Japan through the 'self financed' route. In 2005 only 43% Indian students went to Japan through the government scholarship route, majority 53% went through the 'self financed' route.
